DB-Curator

Agentic scientific database construction with auditable evidence

Dynamic literature construction + predicate-state verification

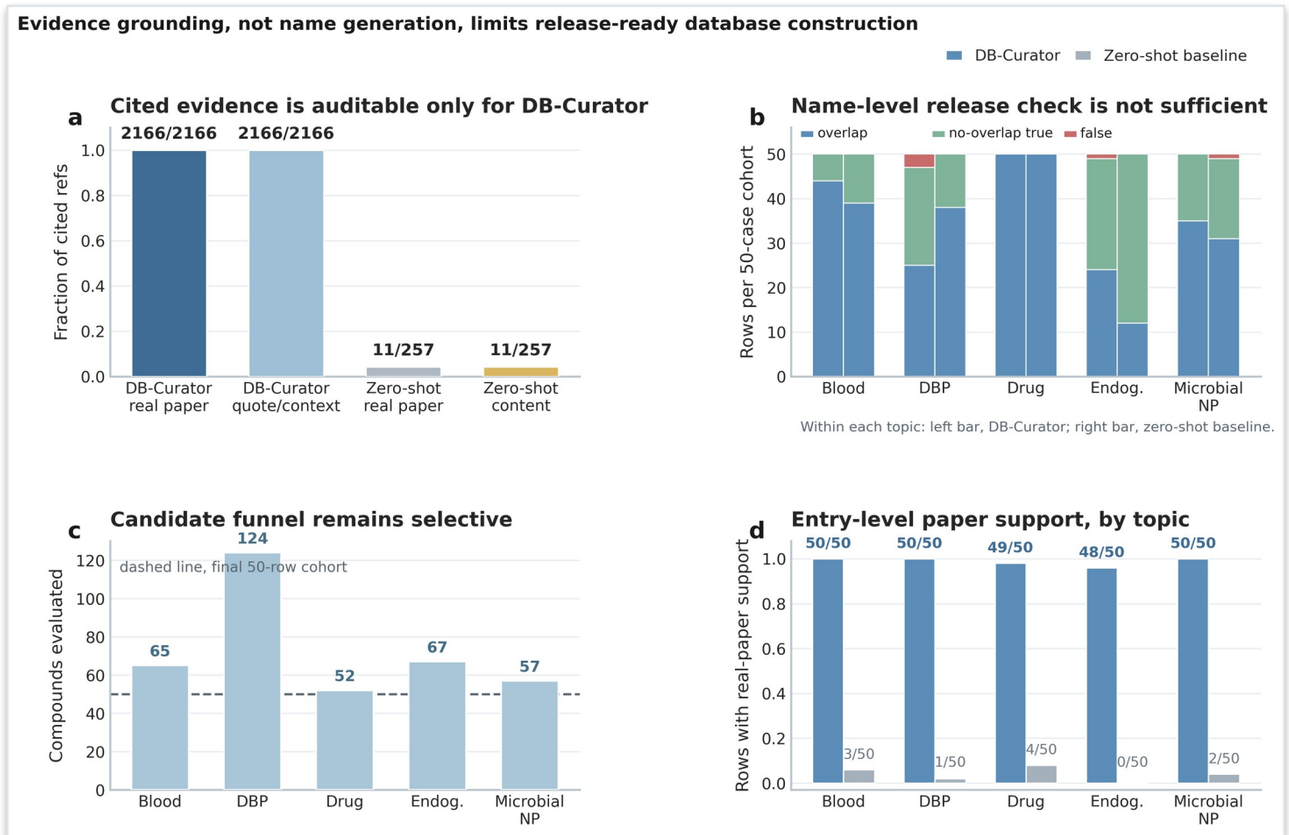

Chen Zhao, Botao Liu, Xiaoxiao Li, Tao Huan

Agents build evidence, not only answers

Takeaway: the agent controls search, state and stopping criteria for each database entry.

Release-ready rows need evidence trails

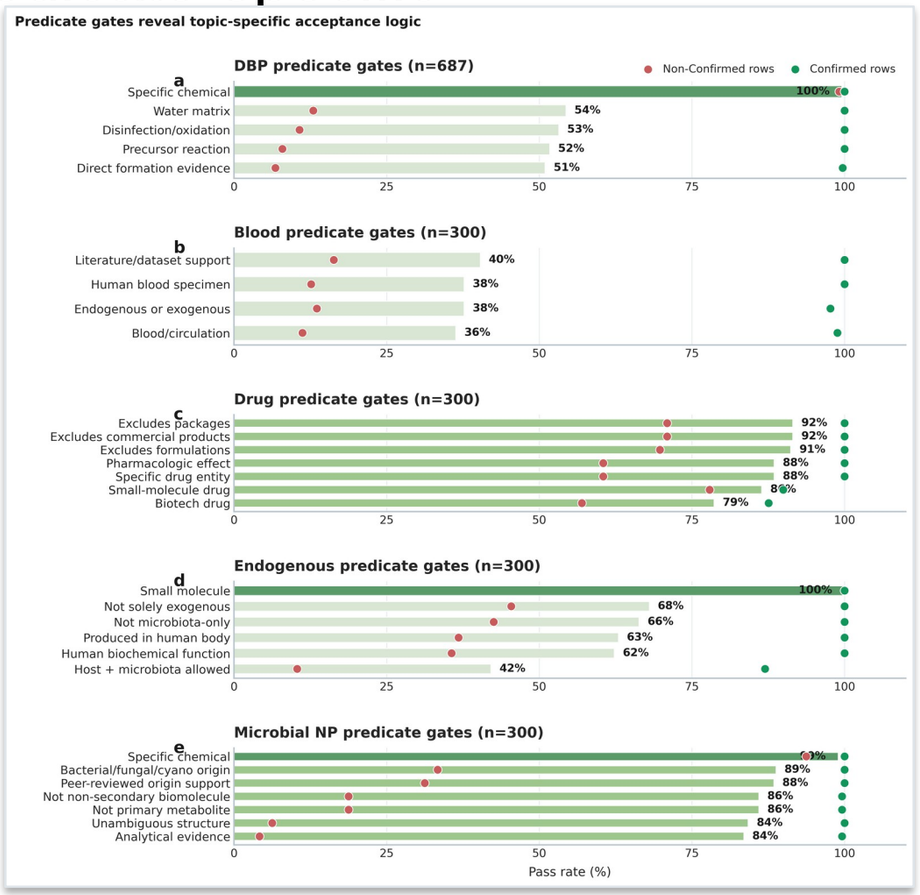

246/250 accepted | **68 new valid entries** | **2,166/2,166 supported** | **baseline: 11/257 refs**

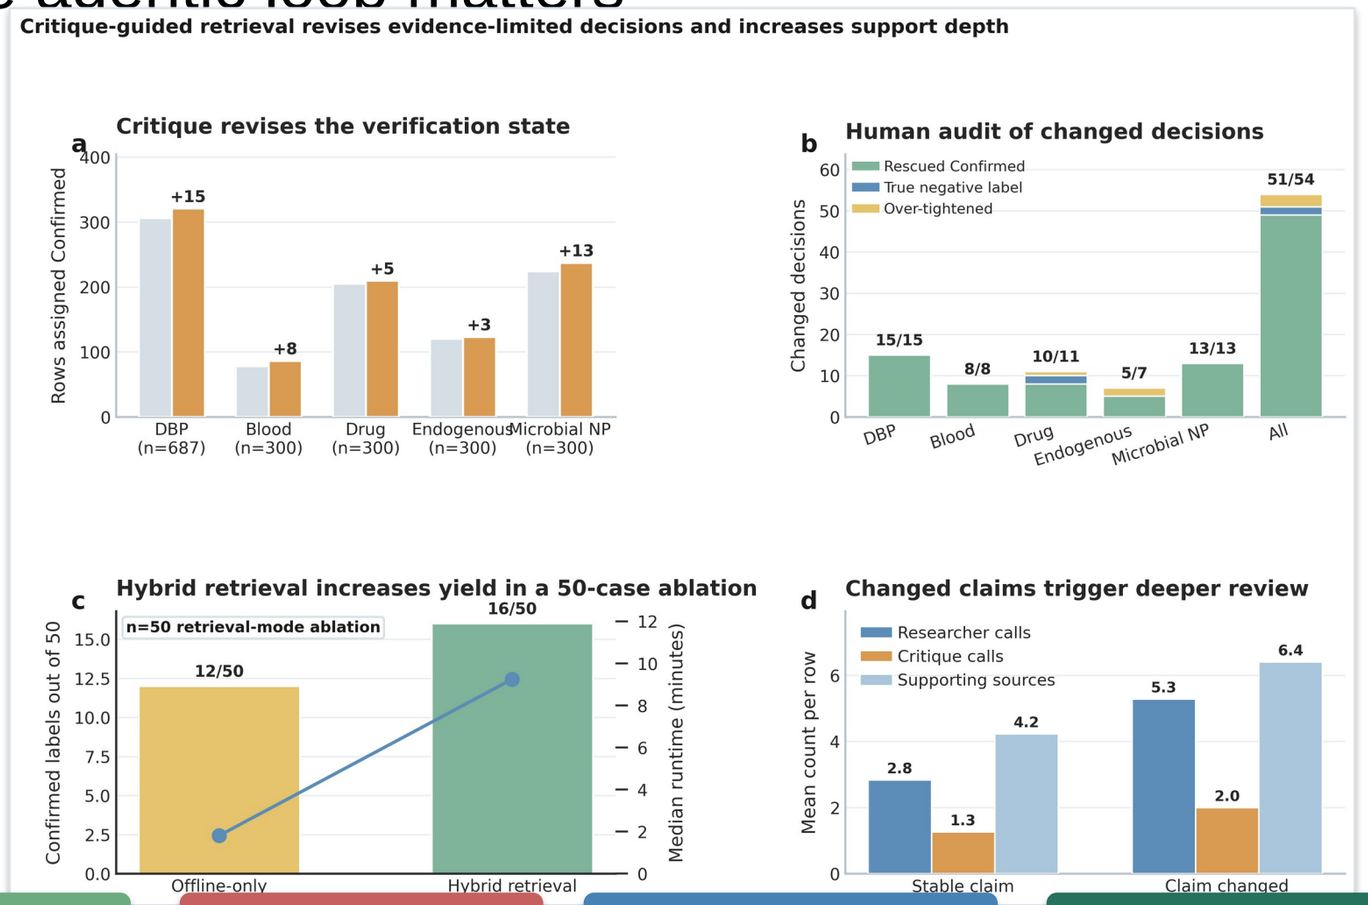

Benchmark scale across five domains

Verification is predicate-specific

Why the agentic loop matters

49 rescued | 5 tightened | hybrid adds evidence | changed claims need review
